## Bulk Mulch

The bulk mulch that we carry is sold by the cubic yard. We can load into a truck or trailer or deliver to the site. Please see an associate for further details.

*Durango Nursery highly recommends viewing mulch in person before delivering. Mulch is a natural product. We are not in control of possible changes in size, shape, and color. For fire wise landscaping, please contact your local Fire Marshal for more information.*

### **Cedar**

**\$129.95/yd<sup>3</sup>**

**cp10396**

100% virgin fibrous cedar bark with a naturally attractive brown-red color. The fibrous nature of this mulch causes it to “knit” itself together which helps hold the mulch in place on steep slopes and in windy areas. Just as all of the other mulches listed here do, the cedar mulch helps retain moisture in the ground. This mulch holds its color much longer than the lighter mulches and is appropriate for formal landscape settings.

### **Cedar Bale**

**\$499.95/4cy bale**

**cp35196**

This bale is sold as a 4 cubic yard compressed bale. This 100% virgin wood product is fibrous in nature. Due to the differences in the debarking process, this mulch contains smaller heartwood chunks than the bulk mulch. This cedar is also brown-red in color and retains its color as well.

### **Mini Pine**

**\$89.95/yd<sup>3</sup>**

**cp7196**

Made from pine or fir, this is a fine, dark brown mulch with some pieces of lighter heartwood from the debarking process. It has an attractive and formal appearance with long lasting effects. It is a 100% virgin wood product that is sold by the yard or by the semi load.

### **Play Soft**

**\$59.95/yd<sup>3</sup>**

**cp4796**

Made from 100% heartwood, this mulch has been specifically engineered for use under and around playground equipment. It has undergone supplementary screening to remove dust and is less susceptible to fungus unlike aspen based mulches. Certification sheets are available upon request.

### **Arborist Mix**

**\$24.95/yd<sup>3</sup>**

**cp1996**

Locally produced by arborists, this mulch has an informal appearance and changes in composition frequently. It typically contains sticks, chips, leaves, and needles. Great for landscape areas that are being naturalized.
